The Belgrade School District was the most expensive high school construction project in Montana. It will cost the state a total of $25 million which is about 2.7 percent above the national average. The $25 million will also fund a long-term plan for the school and bring enrollment capacity to 1,200. The school district currently has about 800 students.

An average high school bond cost was valued at $182,343. If the bond is approved, the average homeownerschool district could all be on board. The high school bond could also support a bond and two mill levies.

During a School Board meeting, contractors decided the high school bond is more pressing than other mill levies.

Belgrade School District clerk Jake Bates said the state budget for the district's general fund is projected to increase $32,284.90 next year, due to an increase of 0.01% in the state's per capita dollars through eighth grade. The Office of Public Instruction may revise those numbers, through, Bates, noted.

In the high school district, nine fewer students means a potential $12,235 reduction of $9,134.50. Despite that decrease, Bates said other influences on the budget could result in a budget similar to this year's.

Belgrade to put $25M high school expansion on ballot
